

Juan Silva

Design Engineer | Next.js, Python & Scalable Growth Automation

Rio de Janeiro, Brazil (GMT-3) · jaypy.uxdesign@gmail.com

juanpablosilva.com.br · github.com/juansilvadesign · linkedin.com/in/juansilvadesign

Design engineer who both designs and ships: **100+ projects** across a UI-design track at Sagitta Digital and a design-engineering role at Spaceapps, where I **designed and built 4 of the 5 client landing pages end to end** — SYD, upOS, Celus and AllPrice — plus the agency's own trilingual site, as sole author throughout.

Design side: two design systems built from scratch, and dev-handoff specs annotated in-file where developers actually meet them. Engineering side: TypeScript and Next.js across 13+ repositories, Astro across 7, and a **production operations platform — Postgres, session auth, self-hosted — running a two-branch business today**.

Nearshore from Rio de Janeiro, **15h/week**, B2B USD contractor.

SELECTED WORK

SYD — healthcare / psychology landing page

Spaceapps · 2025

Designed and coded

- Designed three audience surfaces — patient, professional and HR — wireframing each and designing all three at 1440 / 1280 / 375, with breakpoints declared as explicit modes in the design file.
- Built them as a Next.js App Router rewrite of an earlier Vite version, with form capture wired to a Node/Express service on Render.
- The audience-segmented information architecture was designed, not merely routed: three wireframe sets and three design sets, one per audience.

NewCar — marketing site + operations platform

2026 - present

Sole author — design and code, both surfaces

- Designed and built the marketing site in Astro, React and Tailwind for a premium auto-maintenance business.
- Designed and built the operations platform — bookings, point-of-sale and a finance dashboard — on Next.js and Postgres with Drizzle ORM, session auth and self-hosted Docker deployment. In daily use across two branches.
- Took it to production and keeps it there: diagnosed and restored a silent outage, carried a database credential rotation through to a verifying probe, and migrated 1,563 historical records.
- Shipped per-branch calendar routing, and a phone/tablet point-of-sale with an offline sale queue so a sale taken without connectivity is not lost.

KAT / Banco Safra — internal brokerage account manager

Sagitta Digital

Owned two operator-facing flows end to end

- Designed the Assessor and Head role flows in full — one of two designers on a team of five, owning two of the six role flows.
- 722 top-level frames across 420 distinct screen names, on an extended licensed base kit.
- Wrote the per-flow behaviour specification as 43 annotations embedded in the design file, where a developer meets them rather than in a separate document.

Private file — available on request

OPEN SOURCE

Six merged pull requests into repositories I do not own — +4,936 / –254 across 79 files.

grab/cursor-talk-to-figma-mcp — MCP write tools for the Figma Plugin API	7.0k ★	PR #185 · 2026
joaogfc/ZeroDelay — browser extension: CI, test suite, release tooling, telemetry	433 ★	4 PRs · 2026
EcomGraduates/loom-downloader — Node CLI: resumable downloads, config precedence	157 ★	PR #10 · 2025

EXPERIENCE

Independent Design Engineer — Locuz / PsiAtiva 2026 – present

- Design and build client-facing sites and internal operations tooling; run n8n growth automation, FastAPI services and Postgres on my own products.

Spaceapps — Design Engineer Mar 2025 – Sep 2025

- Designed and coded 4 of 5 paid client landing pages end to end; implemented the fifth from an in-house designer's file. Also designed and coded the agency's own trilingual site.
- Delivered responsive React and Next.js front ends in TypeScript, Tailwind and Radix; sole author across the repositories, roughly 1.7 MB of TypeScript.
- Implemented route-based internationalisation (pt / en-US / es-AR) and an Express capture service writing to primary and backup Google Sheets via a service account.

Sagitta Digital — UI Designer (intern to junior) approx. 2 years

- Designed high-fidelity mobile, web and desktop product flows across fintech, marketplace, e-learning, healthcare and operations software.
- Built Figma component systems, variables and tokens, interactive prototypes and developer handoff documentation, extending licensed base kits.
- Designed the indicAZ mobile app, shipped in two Google Play listings, and CâmbioFlow, a shipped multi-currency wallet.

STACK

Languages	TypeScript, JavaScript, Python, SQL, PL/pgSQL, HTML, CSS, Shell
Front end	React, Next.js App Router, Astro, Vite, Tailwind, Radix, shadcn/ui, i18n, accessibility, technical SEO
Design	Figma, Figma Plugin API, design systems, variables and tokens, prototyping, developer handoff
Back end & data	Node, Express, FastAPI, PostgreSQL, Drizzle ORM, REST, Docker, Google Sheets API
Quality	GitHub Actions, CI/CD, node: test, ESLint, release automation, browser extension builds
Automation	n8n, Model Context Protocol (MCP), agent tooling, browser automation

EDUCATION & RECOGNITION

- 1st place of 14 teams** — Desafio Ajude uma ONG, a five-month jury-judged UX/UI challenge, May 2022. The prize was a full Alura scholarship.
- UX Unicórnio — UX/UI programme, January – July 2022.
- Digital Design, Universidade Anhembi Morumbi — left in January 2022 to train in UX.
- Portuguese native · English fluent.
